

What sets us apart?

When it comes to network connectivity, MOREnet provides Missouri’s education and research community with the security and reliability that today’s applications and business processes require. MOREnet’s robust fiber backbone and network access effectively supports the performance that our value-adding services demand. Learn more about your MOREnet connection and use this handy checklist to ensure your organization is taking full advantage of your MOREnet membership.

MOREnet provides the full committed information rate (CIR) on all circuits.

The committed information rate is the bandwidth that is guaranteed by a provider. DSL and cable modem providers offer services stating you get “up to” a certain amount of bandwidth with no guarantees.

MOREnet provides full synchronous access on your circuit.

DSL and cable modem providers offer high download bandwidths and low upload bandwidths. Some applications, such as videoconferencing and online curriculum, may not work properly if download and upload speeds differ.

MOREnet has low network subscription ratios.

For every two Mbps of member bandwidth, we provide one Mbps of Internet access. This ratio, along with our 10 Gbps backbone, helps ensure that you get the performance you need.
