

Assessment data shouldn't just be collected—it should be used to make a lasting, meaningful impact for students. Mastery Connect is designed for standards-based teaching and learning, delivering real-time insights into student mastery levels in an intuitive, visual way. Teachers are more empowered to make informed instructional decisions, collaborate in teams, and address each student's academic needs early and often. With district-level curriculum planning, reporting, and benchmark assessments, Mastery Connect is your complete assessment solution.

- Designed to drive student outcomes
- Built on standards
- Complete, flexible assessment
- Powerful collaboration tools
- Integrated with Canvas LMS
- Ready for prebuilt assessment content

Learning is an active process that takes a variety of paths; assessment tools should be just as flexible.

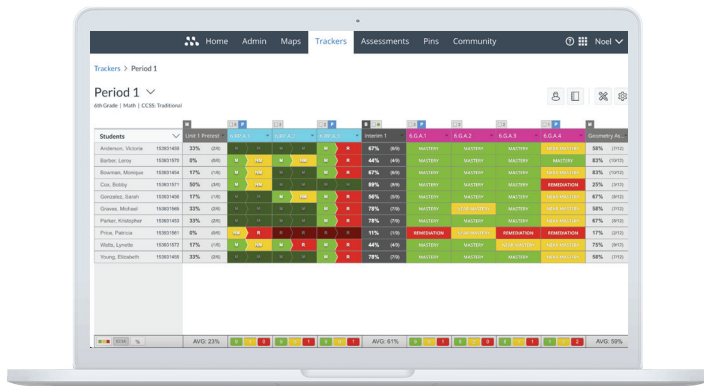

Choose from rubric grading, paper bubble sheets, performance-based evidence of learning, or observational scoring. Available on any device, assessments can also be administered online using teacher-created content or standards-aligned item banks and prebuilts, like the Mastery Item Bank and Mastery View Assessments.

Planning tools streamline curriculum development with guaranteed and reliable curriculum and assessment resources.

Educators can easily access national, state, or custom standards, then organize the standards into units of study and attach assessments and content. The maps can be shared with selected users or automatically distributed throughout the district, ensuring proper scope and sequence and providing a foundation to build upon year after year.

Foster trust and collaboration in teacher teams and across the district with tools that drive the sharing of best practices and build collective efficacy.

Mastery Connect reporting ensures that educators feel comfortable using standard-based reports to have conversations about learning with students, families, and colleagues. Having common data immediately available fuels more meaningful collaboration and self-evaluation.

Meet the Mastery Tracker

Teachers build Mastery Trackers from any set of preloaded academic standards. When assessments are completed, results are immediately populated in the Tracker with an intuitive spotlight approach. Teachers can then clearly see which students are in need of intervention and which standards need reteaching. After a district benchmark is delivered in Mastery Connect, the resulting data is shown alongside formative data, ensuring all assessment results are used to drive student growth.

Reporting for Every Role at Every Level

Use integrated reporting features to track progress of standards for an individual student, a school, or across the district. Drill down into performance on classroom formatives or into district benchmark results, with the ability to disaggregate by a variety of demographic filters.

Integrated with Canvas LMS

Get a streamlined experience with single sign-on and automatic data passback. Launch Mastery Connect assessments directly from Canvas LMS, create Trackers from a Canvas Course, and more.

How can we support better assessment in your district?
